

SYMBOLISE COMMUNICATIONS

CASE STUDY

THE CHALLENGE

To provide fixed and on-the-move communication at remote location.

THE SOLUTION

Symbolise provides satellite antennas from Sat-Lite Technologies. For this project we put together a hardware solution comprised of Sat-Lite Technology's multi-band 1.2m Satellite FlyAway system for base camp.

We provide satellite coverage from a multitude of satellite operators depending on the required coverage. Additionally, to complement the connection from base camp, we provided satellite connectivity with Iridium CERTUS and Iridium GO for on the move connectivity.
